HAL L. SMITH (Tempe, Arizona)
Reduction of Structured Population Models to Theshold-Type Delay Equations and Functional Differential Equations: A Case Study 1

PETER F. STADLER (Göttingen, Germany) AND ROBERT HAPPEL (Wien, Austria)
The Probability of Permanence 25

LEV B. KLEBANOV (St. Petersburg, Russia), SVETLOZAR T. RACHEV (Santa Barbara, California), AND ANDREJ YU. YAKOVLEV (St. Petersburg, Russia)
A Stochastic Model of Radiation Carcinogenesis: Latent Time Distributions and Their Properties 51

N. F. BRITTON AND M. A. J. CHAPLAIN (Bath, England)
A Qualitative Analysis of Some Models of Tissue Growth 77

GARY C. W. SABIN AND DANNY SUMMERS (St. John's, Newfoundland)
Chaos in a Periodically Forced Predator–Prey Ecosystem Model 91

WAI-YUAN TAN (Memphis, Tennessee) AND ROBERT H. BYERS, JR. (Atlanta, Georgia)
A Stochastic Model of the HIV Epidemic and the HIV Infection Distribution in a Homosexual Population 115

PIERO COLLI FRANZONE AND LUCIANO GUERRI (Pavia, Italy)
Spreading of Excitation in 3-D Models of the Anisotropic Cardiac Tissue. I. Validation of the Eikonal Model 145

BRUCE A. LUXON AND RICHARD A. WEISIGER (San Francisco, California)
Extending the Multiple Indicator Dilution Method to Include Slow Intracellular Diffusion 211

JEAN-LUC GOUZÉ (Valbonne, France)
Global Behavior of n-Dimensional Lotka-Volterra Systems 231

QISU ZOU AND ZUHUAN LIU (Manhattan, Kansas) AND IRWIN S. GOLDBERG (San Antonio, Texas)
On Nonaxisymmetric Entry Flow at Very Low Reynolds Numbers 245

Elsevier
